

Application No.: 10/608,026  
 Amendment dated  
 Reply to Office Action of September 28, 2006

**RECEIVED**  
**CENTRAL FAX CENTER**  
**OCT 10 2006**

**Amendments to the Specification:**

Please replace paragraph [0087] with the following amended paragraph:

[0087] Polyamide/polyether block (PEBA) copolymers preferably have polyamide and polyether blocks or segments linked through ester linkages, i.e. polyamide/polyether polyesters. Polyamide/polyether polyester PEBA block copolymers are made by a molten state polycondensation reaction of a dicarboxylic polyamide and a polyether diol. The result is a short chain polyester made up of blocks or segments of polyamide and polyether. Such polymers are made up of at least two polyamide and at least two polyether segments. The polyamide and polyether blocks are not miscible. Thus, the materials are characterized by a two-phase structure having a thermoplastic region that is primarily polyamide and an elastomer region that is rich in polyether. The polyamide segments are semi-crystalline at room temperature. The generalized chemical formula for these polyamide/polyether polyester block copolymers may be represented by the following formula:

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Withdrawn): A radiation cross-linkable medical angioplasty balloon or radiation cross-linkable medical catheter made from a thermoplastic cross-linkable composition, said thermoplastic cross-linkable composition comprising:

(a) a thermoplastic polymer which is the reaction product of an aromatic polyisocyanate and a polyah; and
